Hi,
 I have an Intel Mac (10.4) and have just built and installed MySQLdb (1.2.2), as detailed in the README (and elsewhere), with no errors. When I import MySQLdb in Python (2.5) I get the following:

```
Traceback (most recent call last):
File "<stdin>", line 1, in <module>
File "build/bdist.macosx-10.3-fat/egg/MySQLdb/__init__.py", line 19, in <module>
ImportError: dlopen(./_mysql.so, 2): Library not loaded: /usr/local/mysql/lib/mysql/libmysqlclient_r.15.dylib
Referenced from: ./_mysql.so
Reason: image not found
```

Any assistance would be greatly appreciated!
